DNApainter.com
Marty Brady, Chip Mansure, & Philip Spivey

Handout

DNApainter.com is a remarkable website designed to help genealogist and family history enthusiasts analyze and understand their autosomal DNA test results. It contains a number of tools that can be used to help answer questions about our family histories. This site is not intended for those just learning about DNA. The tools you will find here assume that you already have an understanding of DNA, have done DNA testing and now need to contrast and compare the matches generated from those tests.

In addition to today's presentation, we think you will find the following sources helpful in learning how to use these valuable tools.
